Implementation Science
Study Design and Methods
Used by University of Maryland Investigators

Sponsored by Center for Health Outcomes Research and PATIENTs

April 30, 2015
1-2 p.m.
School of Nursing Room 140
Objectives

1. Discuss extramurally funded implementation study case examples.
2. Describe implementation study designs, conceptual frameworks, methods, and lessons learned.
Advance dissemination and implementation strategies for patient centered outcomes research findings for patients, health care providers, and healthcare systems to utilize evidence-based interventions.

See http://patients.umaryland.edu/
Implementation research is the scientific study of methods to promote the systematic uptake of proven clinical treatments, practices, organizational, and management interventions into routine practice, and hence to improve health.

In this context, it includes the study of influences on patient, healthcare professional, and organizational behavior in either healthcare or population settings.

About Implementation Science available at:
http://www.implementationscience.com/about
Implementation Science

Implementation science is the study of methods to promote the integration of research findings and evidence into healthcare policy and practice.

It seeks to understand the behavior of healthcare professionals and other stakeholders as a key variable in the sustainable uptake, adoption, and implementation of evidence-based interventions.

Implementation Science is Study of...

Adoption and uptake of... effective treatments, practices, interventions for ... patients, professionals, organizations in...

healthcare or populations

Goal = Improve health.
